

Expert in Pharmaceuticals R & D as

Medical Writer

Development and licensing of innovative products to
treat chronic inflammatory conditions and pain

Did you graduate in Medicine or Natural Sciences? Have you gained several years of professional experience in Clinical R & D and/or Regulatory Affairs? Do you enjoy writing documents of a scientific and regulatory nature? Are you capable of presenting medical scientific data in a clear and comprehensible manner? Do you have a sound knowledge of statistics and of written and spoken English? Do you perhaps also have experience in document management? Do you have a flair for organisation and enjoy working independently? Perhaps you would enjoy bringing projects to fruition in a smaller environment than you are accustomed to, albeit with the advantage of shorter decision-making paths and within a dynamic team, and consequently taking greater personal responsibility? - If so, then please read on:

We are the spin-out company of a leading global pharmaceuticals group based in the Basle region, with a subsidiary in the Rhine-Neckar region, where you would be working. The Group has an extremely interesting portfolio of new products to treat chronic inflammatory conditions and pain, which it is expanding through in-house development and by selectively buying in other products. Some European licences have already been granted for our lead product. We have very sound financial backing and are therefore in a position to take things through to their logical conclusion.

We are now looking for someone like you, with the profile described above, to support ongoing product development. You will check, produce, format and administer regulatory documents, in accordance with the relevant guidelines and internal SOPs. You will also be responsible for producing and coordinating manuscripts for scientific publications, and for coordinating external service providers and Medical Writers. You will also develop and draw up the Group's internal document standards.

Would you be interested in this assignment within a growing group?

Contact Mr. Ralph Haubner for more information about this position, quoting code RH 2367. Simply contact him by phone, or send him your documents, by e-mail if you prefer, to: rh@dr-weber-partner.de.
